AUDI DAY MAKEUP LOOK (ADML)

Technical task:
The technical innovation describes a sun visor with integrated fixtures for shelves for the storage of cosmetics and make-up tools, in order to have these in the immediate vicinity of the sunscreen integrated make-up mirror.

Initial situation:
Nowadays, sunblinds are installed in the vehicle, which do not contain trays for cosmetics and make-up tools. They are often stowed in the glove compartment or other shelves, which are far from the make-up mirrors integrated in the sunblind, which can lead to cumbersome searching and gripping after the cosmetics cloths and the make-up tools.

Solution:
The technical innovation provides for the integration of a removal box for cosmetics and make-up tools into the sun visor already present in the vehicle. Furthermore, the user can communicate with the sun visor via voice input. By means of voice commands, e.g. „Make-up“ or „make-up“, the sun visor can be opened or closed automatically.

Advantages:
- Uniform and defined positioning of the shelves.
- Premium-like.
- Easy handling (no unnecessary bending or stretching).
- Optical upgrading by changing the positioning of the airbag warning.

Possible application:
- Use in all motor vehicles with sun visors.
